

CASE 3

53 year old presents with compensated cirrhosis from NAFLD and history of diabetes mellitus, BMI 45. She has no history of ascites, encephalopathy or varices on endoscopy. She has seen a dietician and personal trainer and has not lost weight.

Platelet count is 162,000, liver tests are normal, INR 1.0.

CT abdomen shows no splenomegaly and no evidence of portal hypertension

She is not interested in endoscopic treatment for obesity because her friend had a bad experience
